

Javascript Coding Challenge

Requirements

Write a function that accepts an integer and returns a “validation” number. This validation number is calculated by adding all the digits in the input.

If the result of this sum has more than a single digit, another iteration is required, repeat the process until a single digit number is calculated.

1. `function calculateValidationNumber(input) {}`
- 2.
3. `// calculateValidationNumber(444444); // Output: 6`

```
444444
4 + 4 + 4 + 4 + 4 + 4
2 + 4
= 6

1234
1 + 2 + 3 + 4
1 + 0
= 1

23478998
2 + 3 + 4 + 7 + 8 + 9 + 9 + 8
5 + 0
= 5
```

Submission

- Upload your source code to Github/Gitlab and make sure it will be accessible.
- Send the Github/Gitlab link to aristotle.espiritu@moscord.com and samuel.francisco@moscord.com
